

# Plate Trolley

## Plate Transport System – The perfect companion

The Plate Trolley allows plates to be transported from any prepress production area or plate room with ease; it's the perfect companion to the GravityStack44 plate stacker. By minimizing the possibility of scratching and denting, plates will arrive in the press room ready to hang and go. Designed with the same sturdiness and simplicity as its mate, the GravityStacker44, the PlateTrolley has two functional sides to enable transition from CTP or conventional plate making to press room. The PlateTrolley is large enough to hold 44 inch plates, but easily maneuverable in tight spaces. When necessary, the PlateTrolley folds flat for storage.
